MIS ATTENDANCE REPORT

Simple User Guide • Purpose, Usage and Examples

Screenshot 1 — Select the reporting period

Month	Year	Start / End
Oct	2026	1 Oct – 31 Oct

Change the Month and Year selector cells in the workbook. Dates should update automatically.

What this file does

This Excel workbook helps an MIS Executive or team lead record employee attendance for a selected month, then automatically totals Present and Absent entries for each employee.

1. Why use this attendance tracker?

The tracker keeps monthly attendance in one structured sheet instead of maintaining separate daily lists. It is useful for routine MIS reporting and quick checks before sharing an attendance summary.

Benefit	How it helps
One monthly view	See employee names, projects and daily attendance in one place.
Less manual counting	Present and Absent totals are calculated with formulas.
Consistent reporting	Use the same format each month for easier review.
Faster checks	Spot missing entries and compare attendance across employees.

2. How to use it — step by step

Step 1 — Open the Tracker sheet

This is the main working sheet. Keep the existing formula cells intact.

Screenshot 1 — Select the reporting period

Month	Year	Start / End
Oct	2026	1 Oct – 31 Oct

Change the Month and Year selector cells in the workbook. Dates should update automatically.

Step 2 — Select the month and year

In the current workbook, Month is shown in cell M3 and Year in cell S3. Change these selector values to the period you need. The date row is designed to update based on the selected period.

Step 3 — Check employee details

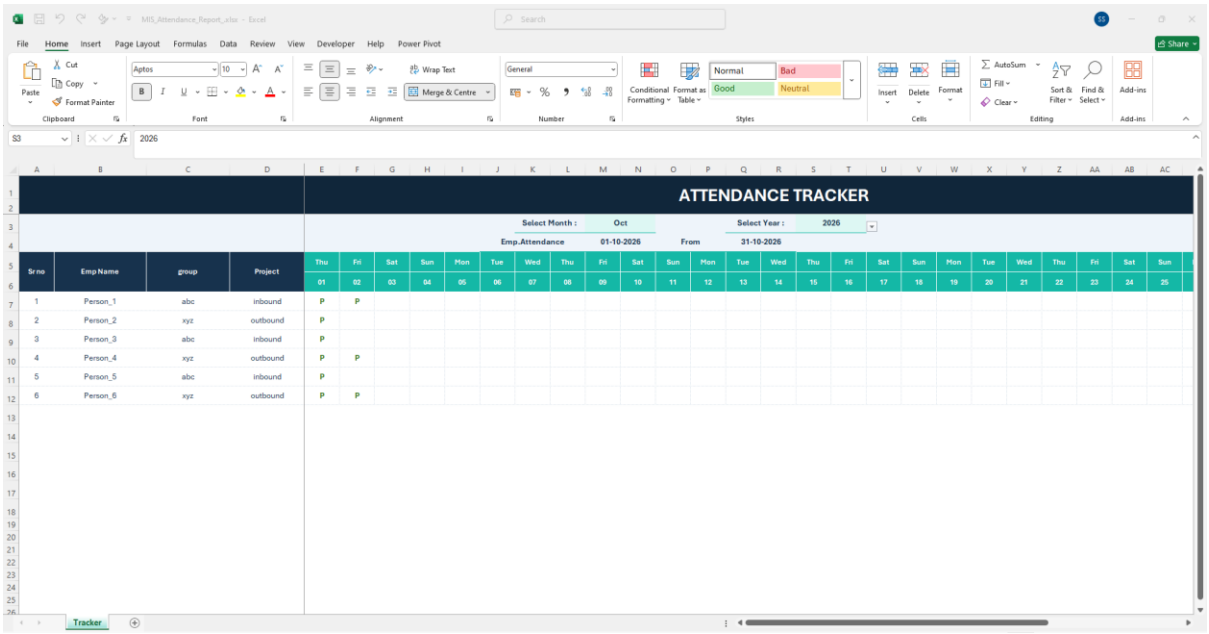

Review Sr No, Emp Name, group and Project. Replace sample employee names and sample details with your real team information.

3. Enter daily attendance

Screenshot 2 — Enter daily attendance

Emp Name	Group	Project	1 Oct	2 Oct	3 Oct	4 Oct	5 Oct
Person_1	abc	inbound	P	P			
Person_2	xyz	outbound	P				
Person_3	abc	inbound	P				
Person_4	xyz	outbound	P	P			

Example only: enter P for Present or A for Absent in each employee's date cell.

For each employee, go to the cell under the correct date and enter one of the following:

Code	Meaning	Example
P	Present	Employee attended work
A	Absent	Employee was absent
Blank	Not entered yet	Confirm and update before final reporting

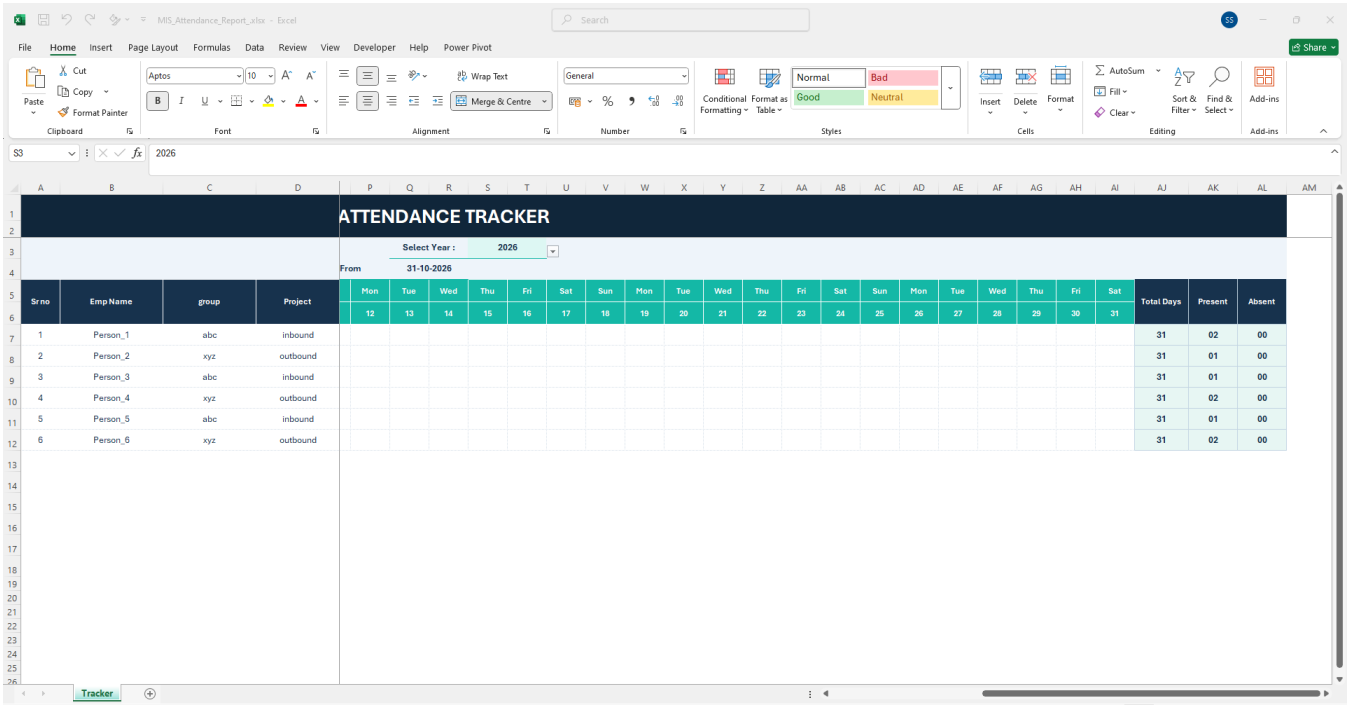

Important: The current summary formulas count only the exact entries P and A. Do not enter codes such as WFH, Leave, Holiday or Half Day unless the workbook formulas and reporting rules are updated to support them.

4. Read the automatic summary

Screenshot 3 — Review the automatic summary

Emp Name	Total Days	Present	Absent
Person_1	31	2	0
Person_2	31	1	0
Person_3	31	1	0
Person_4	31	2	0

The workbook uses formulas to count P and A entries. Sample numbers are illustrative.

At the right side of the tracker, the summary columns show:

- Total Days: number of calendar days in the selected month, based on the month-end date formula.
- Present: counts cells containing P for that employee.
- Absent: counts cells containing A for that employee.

5. Final checks before sharing the report

- Confirm the correct month and year are selected.
- Check employee names, groups and projects for spelling or missing details.
- Make sure attendance has been entered for all relevant dates.
- Review the Present and Absent totals against source records.
- Save a copy with a clear name, for example Attendance_Oct_2026.xlsx, before making changes for another month.

6. Common issues and quick fixes

Issue	What to check
Dates do not look right	Confirm Month and Year selector cells; ensure formulas in the date row were not overwritten.
Present/Absent total is wrong	Check that entries are exactly P or A and are in the correct employee row.
Totals are blank or not updating	Make sure formulas in the summary columns are intact and Excel calculation is enabled.
Need to add an employee	Add a new row carefully and copy formulas/formatting from the row above.
Need Leave / Holiday / WFH codes	Update the workbook's counting logic and agree on rules before using new codes.

Notes about this workbook

The supplied file contains sample employee names (Person_1, Person_2, etc.) and sample attendance values. Replace them with approved real data before operational use. The daily date headers and summary columns are formula-driven, so avoid typing over formula cells. The screenshots in this guide are simplified examples for learning; they are not direct screenshots of the Excel application.

Quick reminder: Select period → verify employee list → enter P/A daily → review totals → save and share.
